

(d) L_{FFN1} sub-factors of each output circuit — weighted-average input (top, bold: dominant digit) and per-digit loading (bottom; blue even, red odd)

(e) CLS attention per factor

CLS-token weight 0.027; deviation of each leaf k_0 from the mean
(all 36 factor maps: pairwise $\cos \geq 0.97$)

(f) strongest stimuli per circuit
